CEI Evaluation	07/27/2017	Activity Location: NJ	By: STATE	Identifier: 001	Person: COMLE	Suborganization:	Found Violation: NO
NOC Date:		Citizen Complaint: NO	Multimedia Inspection: YES	Sampling: NO	Not Subtitle C: NO	Day Zero: 07/27/2017	Focus Area:
Eval. Notes:	A CESQG SCI Inspection was conducted for the above facility. The previous inspection was conducted on 8/11/05 with no violations cited. Okonite Company (Paterson Plant) manufactures electrical wire and cable for the low, medium and high voltage equipment and utility services. These cables transport electricity from power plants to various regional distribution plants and their transformers. Process: The company receives copper wire bundles from an outside source and is dipped into a dye made of synthetic oil to cool the copper material down. Once cooled down, the wire is run through an annealing machine to give its flexibility properties back. The wire is then spooled on a bobbin and brought to a machine that twists and braids the wire material together. The braided wires are then formed into several shapes in order to fit into the outer cable shells. This resultant wire strand is now a wire conductor. These wire conductors are then wrapped in oil soaked paper to protect the wire and the large spools of wire are placed in a carriage and into a large vacuum tank. Voltage and heat is applied to the spool and left to dry for a day. The next day the tank is flooded with oil and left to sit there for approximately 5 days for treatment. The large spools are left hanging to dry and residual oil to drip out of them and onto large capture pans. The oil is then pumped out and returned to several product storage tanks. Any residual oil is collected in a secondary containment system (large pans) and sent to the on-site used oil system for disposal. This system consists of the oil/water separator where the used oil is removed and hard piped to a 1,000 gallon AST Used Oil tank and the oily/water mix goes to a secondary AST. Lorco from Elizabeth removes the used oil from the site. The last phase of the operations consists of the large spools of copper wire material brought to the lead extrusion area. The wire is then fed through a machine that melts l						

No Linked Violations

Note: Penalty information associated with an enforcement action is reported with the enforcement action. For enforcement actions associated with multiple violations, the penalty information will be reported with each violation, however, the penalty is only assessed once, regardless of the number of violations associated with the enforcement.
